

# Besidebanq — Product Requirements Document (PRD)

---

**Version:** 1.5

**Date:** July 2026

**Status:** Draft — Pending Design & Engineering Review

**Changelog:** v1.5 — Added global USP, expanded target markets (diaspora in Western Hemisphere/Europe/UK/Asia), stablecoin + fiat multi-asset wallet architecture (custodial), updated BanqDrop to support stablecoins off-chain, clarified V1 international transfer infrastructure (Nigeria rails, China fiat partner, global stablecoin-to-wallet), introduced tiered banq Points gamification system, updated referral program to points-only rewards, and added full Marketing Website Specifications (Section 21).

## 1. Product Overview

**Besidebanq** is a next-generation fintech super-app designed for the global African community. It combines global money movement, intelligent AI-powered finance, stock & prediction market trading, group pooling, lifestyle services, and credit building — all in one seamless mobile experience.

### Unique Selling Proposition (USP)

- **"Helping people live a better life globally"** — Besidebanq is built to empower the global African community by removing financial barriers, enabling wealth creation, and simplifying support for loved ones across borders, directly improving their quality of life.

### Core Value Proposition

- Move money globally using stablecoins with low fees and fast settlement.
- Build credit history through everyday transactions.
- Invest in US stocks, ETFs, and forecast markets.
- Pool money collectively with trusted circles and govern transfers by democratic vote.
- Access lifestyle services (eSIM, utility bills) without leaving the app.
- Let **Euda**, the AI financial agent, manage and narrate your finances autonomously.

### Target Markets

- **Primary Users (Senders):** The global African diaspora residing in the Western Hemisphere (US, Canada), Europe, the UK, and Asia.
  - **Recipients:** Anyone, globally — individuals, businesses, suppliers, or institutions reachable via Besidebanq's V1 payout rails:
    - Nigeria (local banking rails)
    - China (dedicated fiat payout partner — CNY)
    - Anywhere in the world via stablecoin transfer to an external crypto wallet
    - Any Besidebanq @tag user globally via BanqDrop
-

## 2. Brand & Naming Glossary

| Concept               | Besidebanq Name    | Notes                                                                                                                                                                        |
|-----------------------|--------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| App                   | <b>Besidebanq</b>  | All lowercase, no space                                                                                                                                                      |
| AI Agent              | <b>Euda</b>        | Named after <i>Eudaimonia</i> (Greek for human flourishing, well-being, and living a good life). Connected directly to our USP of helping users live a better life globally. |
| User tag/handle       | <b>@tag</b>        | e.g. <code>@johndoe</code> — public identity across the app                                                                                                                  |
| In-app P2P transfer   | <b>BanqDrop</b>    | Official name for instant, zero-fee peer-to-peer transfers                                                                                                                   |
| Group pooling feature | <b>Buddy</b>       | Earmarked group funds with vote-based transfers                                                                                                                              |
| Loyalty program       | <b>banq Points</b> | Earn points for transactions, referrals, activity                                                                                                                            |

## 3. User Personas

### Persona 1 — The Diaspora Professional

- African living in Canada, the UK, Europe, or Asia.
- Sends money home monthly to family in West, East, or Central Africa.
- Wants USD savings, credit building, and a global card.
- Uses Euda to automate remittances and bill payments.

### Persona 2 — The Young African Professional

- Based in a major African city, 24–35.
- Invests in US stocks and prediction markets.
- Pays bills via app, uses eSIM when traveling internationally.
- Participates in Buddy for shared savings goals.

### Persona 3 — The SME Owner / Importer

- African business owner importing from suppliers worldwide (e.g. China, Europe, or Asia).

- Needs direct, low-cost international stablecoin payout capabilities and fiat destination payouts (China).
- Uses Buddy for group supplier payments with business partners.

Persona 4 — The Social Spender

- Travels frequently, purchases eSIM plans in-app.
- Earns and redeems banq Points across all transaction types.
- Refers friends for bonus banq Points.
- Uses BanqDrop for instant group bill splitting in fiat or stablecoins.

4. Navigation & App Structure

Bottom Navigation Bar (5 Tabs)

Top Bar (Persistent Across All Screens)

- **Euda AI input bar** — tapping triggers Euda overlay from bottom.
- **banq Points / Gift icon** — quick access to rewards.
- **Bell icon** — notifications with unread badge.

## 5. Onboarding & KYC

### 5.1 Splash & Entry

- Animated logo splash screen (Lottie animation)
- Two CTAs: **Sign Up** | **Log In**

## 5.2 Sign Up Flow (Frictionless Entry)

To maximize conversion, initial signup is extremely streamlined, requiring only basic credentials.

### Path A — Standard Sign Up

1. **Email address** entry → **OTP verification via Email** (6-digit code sent to inbox, 10-minute expiry).
2. **Password** creation (min 8 chars, 1 uppercase, 1 number, 1 special character).
3. **Create @tag** — unique handle (e.g. `@johndoe`).
4. **Terms & Privacy** acceptance → Account created & direct access to Home Dashboard.

### Path B — Google Sign-In (OAuth 2.0)

1. Tap **"Continue with Google"** on entry screen.
2. Select or confirm Google account via native OS sheet.
3. Besidebanq receives verified email, name, and profile photo.
4. **Create @tag** — unique handle (pre-suggested from Google name).
5. **Terms & Privacy** acceptance → Account created & direct access to Home Dashboard (no email OTP required).

## 5.3 KYC — Progressive Account Tiers

Compliance verification is progressive and prompted when a user attempts to execute financial actions rather than blocking signup.

| Tier          | Name            | Requirements                                                                                                                                                                                                           | Capabilities Unlocked                                                                                                                                               |
|---------------|-----------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Tier 1</b> | Basic Profile   | <ul style="list-style-type: none"><li>- Full legal name &amp; Date of Birth</li><li>- Residential Address</li><li>- Phone number + <b>SMS OTP verification</b></li><li>- Create 4 or 6-digit transaction PIN</li></ul> | <ul style="list-style-type: none"><li>- Receive funds</li><li>- Add external cards</li><li>- Basic domestic transfers (low limits)</li></ul>                        |
| <b>Tier 2</b> | Verification    | <ul style="list-style-type: none"><li>- 11-digit Bank Verification Number (BVN) check (Nigeria only)</li><li>- Employment Information (status, monthly range)</li></ul>                                                | <ul style="list-style-type: none"><li>- Domestic outgoing transfers (standard limits)</li><li>- Virtual card issuance</li><li>- BanqDrop in-app transfers</li></ul> |
| <b>Tier 3</b> | Full Compliance | <ul style="list-style-type: none"><li>- Government-issued ID upload (Passport, ID card)</li><li>- 3D Liveness Selfie Scan</li></ul>                                                                                    | <ul style="list-style-type: none"><li>- International Transfers (Stablecoin rails)</li><li>- Physical card orders</li><li>- Maximum transfer limits</li></ul>       |

### KYC Verification Rules:

- BVN must match the legal name and Date of Birth provided in Tier 1.

- Mismatch errors are shown inline with helpful "Try Again" messaging.

---

## 6. Home Dashboard

### 6.1 Card Widget

- Displays primary active Visa card (virtual or physical).
- Branded card design.
- "+ **Add card**" to order or link a card.
- Swipeable carousel if multiple cards exist.

### 6.2 Balance Section

- Large primary balance display in the selected wallet currency.
- **Eye icon** — toggles balance visibility (privacy mode).
- **Accounts dropdown** — switch between fiat wallets (NGN, USD, EUR, GBP) and stablecoin wallets (USDC, USDT, wUSD). Each wallet displays its own independent balance.
- Income/Expense split: +\$0.00 ▲ | -\$0.00 ▼ (adapts to selected wallet currency).

### 6.3 Balance Chart

- Interactive line/area chart.
- Time range toggles: 1H · 1D · 1W · 1M · 3M · YTD · 1Y · All
- Tap any point to see balance at that moment.
- Swipeable second view: Category breakdown (donut chart).
- **Euda** narrates significant changes inline.

### 6.4 Quick Actions Row

- **Add Funds:** Fund wallet from bank or card.
- **Send:** Opens Move tab.
- **Swap:** Currency exchange between wallets (instant execution).
- **More:** Request money, pay bills, etc.

### 6.5 Savings Widget

- Displayed as a card on home screen showing APY rate prominently (e.g. 3.1%).
- Tap to open full savings detail page.

## 6.6 Spending Insights

- **Euda**-powered spending summary.
- Shows total spent this period and category breakdown.
- **Empathetic AI Insight Tone:** Euda focuses on supportive, positive feedback. Instead of dry or guilt-inducing statements, Euda reframes spending constructively to encourage healthy habits (e.g. framing entertainment as self-care, dining as social bonding).
  - *Example: Instead of "You spent 20% more on entertainment this month"  $\rightarrow$  "You invested 20% more in self-care and entertainment this month. Taking care of yourself is important! Let's adjust our budget slightly elsewhere to keep us balanced."*

## 7. Euda — AI Agent

### 7.1 Overview

**Euda** is Besidebanq's autonomous AI financial agent. The name is derived from **Eudaimonia** (Greek for human flourishing, well-being, and living a good life), reflecting Besidebanq's core USP of helping users live a better life globally. Euda serves as the primary interaction layer — accessible from any screen via the persistent top search bar, and as a dedicated tab in the bottom nav.

**Mascot:** Gradient teardrop/play-button shape with a smiley face.

**Personality & Tone:** Warm, empathetic, supportive, and positive. Euda acts as a financial partner rather than a strict auditor. It celebrates healthy lifestyle spending (e.g., self-care, learning, family gifts) while constructively suggesting alignment with the user's financial goals.

- **Autonomous Execution Guardrails (Critical Security):** Euda can read balances, analyze spending, build budget forecasts, and prepare draft payments (e.g., preparing a BanqDrop or bill payment). However, **Euda is strictly prohibited from executing any outward transaction autonomously.** Every financial transaction drafted or proposed by Euda requires explicit user authorization via Transaction PIN or Biometric confirmation (Face ID/Fingerprint).
- **Query Rate Limiting:** To prevent API cost exploitation, Euda query input is rate-limited to a maximum of 100 queries/prompts per user per 24-hour cycle. Nearing the limit displays a friendly, contextual alert.

### 7.2 Access Points

- **Top bar input (persistent):** Tapping the search/prompt bar on any screen slides up the Euda overlay from the bottom.
- **Euda tab:** Full dedicated chat screen in bottom nav.
- **Scan camera icon:** Direct access to "Scan to Transfer" camera within Euda input bar.

- **Inline suggestions:** Context-aware nudges on Home, Trade, and Lifestyle screens.

## 7.3 Capabilities

| Capability         | Example Prompt / Action                                                            |
|--------------------|------------------------------------------------------------------------------------|
| Balance queries    | "What is my wallet balance?"                                                       |
| Spending summaries | "Summarize my May spending"                                                        |
| FX rates           | "What's today's NGN to USD rate?"                                                  |
| Send money         | "Send ₦5,000 to @john"                                                             |
| BanqDrop a friend  | "BanqDrop ₦2,000 to @sarah"                                                        |
| Save money         | "Move \$50 to my savings"                                                          |
| Pay bills          | "Pay my electricity bill"                                                          |
| Investment info    | "How is AAPL doing today?"                                                         |
| Forecast market    | "What's the current odds on the OpenAI IPO market?"                                |
| Buddy              | "Start a vote to send ₦20,000 from our Circle to John"                             |
| Scan & Transfer    | [Upload image/screenshot] "Find the account details in this screenshot and pay it" |

## 7.4 Context & Learning

- Euda improves with more account data.
- Requires completed KYC to access full capabilities.
- Shows "Give Euda a moment..." loading state when processing.
- Maintains full conversation history.

## 7.5 Rate Your Conversation

- Floating feedback widget visible on key screens.
- "Rate your conversation · Reply from Besidebanq" collects thumbs up/down + optional text feedback.

# 8. Move — Send & Receive Money

## 8.1 Screen Structure

Two mode tabs at top: **Accounts** (bank/cross-border transfers) | **BanqDrop** (in-app P2P, free).

## 8.2 Bank Transfer (Domestic Mode)

- Currency selector with flag dropdown (NGN default).
- Amount input with available balance shown inline.
- "Send to" field — resolves account number + bank name in real-time via bank API lookup.
- **Recipient Confirmation Screen:** Before proceeding to PIN entry, the app displays a full confirmation sheet showing:
  -  Verified recipient full name (returned from the bank's account name lookup API)
  -  Bank name
  -  Account number
  -  Amount to be sent
  -  Transaction fee shown upfront
  - User must explicitly tap "**Confirm & Proceed**" before PIN/biometric authorization.
- Confirmation screen → PIN/biometric entry → Transaction receipt.

## 8.3 BanqDrop — In-App P2P Transfer

- **Free** for all Besidebanq-to-Besidebanq transfers, always.
- Find recipient by: **@tag** | **Phone number** | **QR code scan**.
- Recipient avatar + full name shown as confirmation before sending.
- Optional **note or emoji** attached to transaction (social/viral mechanic).
- Instant settlement (no delay) and zero fees.
- **Multi-Asset Support:** BanqDrop supports sending both fiat balances (NGN, USD, EUR, GBP) and stablecoins (wUSD, USDC, USDT). The sender selects the asset from a dropdown before confirming.
- **Off-Chain Settlement:** All BanqDrop transfers (including stablecoin BanqDrops) are settled on Besidebanq's internal ledger. No blockchain transaction is broadcast, resulting in **zero gas fees** and instant execution regardless of asset type.

## 8.4 International Transfer

Besidebanq processes cross-border transfers using a V1 infrastructure that supports three distinct payout rails:

### Payout Rails (V1 Launch)

| Destination               | Method              | How it Works                                                         |
|---------------------------|---------------------|----------------------------------------------------------------------|
| <b>Nigeria (Domestic)</b> | Local Banking Rails | Standard NGN bank transfer with verified recipient name confirmation |

| Destination                                   | Method                        | How it Works                                                                                          |
|-----------------------------------------------|-------------------------------|-------------------------------------------------------------------------------------------------------|
| <b>China</b>                                  | Dedicated Fiat Payout Partner | CNY settled into Chinese bank accounts, Alipay, or WeChat Pay via vendor-agnostic partner             |
| <b>Any Besidebanq @tag (Global)</b>           | BanqDrop (Off-Chain)          | Instant, free — sender BanqDrops NGN/USD/EUR/GBP/wUSD/USDC/USDT to any @tag globally                  |
| <b>External Crypto Wallet (Rest of World)</b> | On-Chain Stablecoin           | Recipient provides external wallet address; Besidebanq executes on-chain transaction; gas fee applies |

### China Fiat Payout — Confirmation Flow

Where the payout partner API supports recipient verification, Besidebanq will display a pre-authorization confirmation screen showing:

-  Recipient name (as registered with the Chinese bank, Alipay, or WeChat Pay account — if returned by the partner API)
-  Destination bank name or payment method (Alipay / WeChat Pay)
-  Bank account number or payment ID
-  CNY amount to be received (after FX conversion)
-  Total fee and exchange rate shown transparently
- User must explicitly tap **"Confirm & Proceed"** before PIN/biometric authorization.
- *Note: Name verification availability depends on the fiat payout partner's API capabilities. Where unavailable, the user is shown a disclaimer and prompted to double-check the details manually.*
- **Just-In-Time (JIT) CNY Conversion:** Besidebanq does not store or hold custody of CNY balances for users. All China payments are funded via real-time "Just-In-Time" conversion from the user's active fiat wallets (USD, EUR, GBP, NGN) or stablecoin wallets (USDC, USDT, wUSD) at the moment of payment execution.

### Custodial Wallet Architecture

- Each user is automatically assigned a unique **deposit wallet address per supported network** (e.g., one TRC-20 address, one Solana SPL address, etc.) upon activating their stablecoin wallet.
- Besidebanq manages private keys under a **custodial model** — user stablecoin balances are tracked on Besidebanq's internal ledger.
- Deposit addresses are visible in-app under each stablecoin wallet's "Receive" screen.
- Internal BanqDrop stablecoin transfers do **not** broadcast to the blockchain — they are settled as internal ledger credits/debits only.
- External on-chain sends deduct from Besidebanq's custodial pool and broadcast to the selected network.

## Supported Stablecoins & Networks

- **Supported stablecoins: wUSD, USDC, and USDT.**
  - **Supported Crypto Networks (Top 8):**
    1. **Tron (TRC-20):** Primary network for USDT transfers; widely used in emerging markets for low cost.
    2. **Solana (SPL):** Ultra-high-speed, sub-penny fees; standard for USDC settlements.
    3. **Base (L2):** Optimized for low-cost USDC transfers.
    4. **Arbitrum One (L2):** High liquidity L2 for both USDC and USDT.
    5. **Ethereum (ERC-20):** Deepest institutional liquidity, suited for large transactions.
    6. **BNB Smart Chain (BEP-20):** Widely used globally for low-fee USDT transfers.
    7. **Polygon PoS:** High developer adoption, cheap transaction fees.
    8. **Optimism (L2):** Superchain-secured network for low-fee transactions.
- 

## 8.5 Scan to Transfer (OCR Engine)

A unified scanning engine accessible via the **Scan**  button in the **Move** tab and a camera shortcut in the **Euda** input bar.

It enables instant transfers by scanning:

1. **QR Codes:** Decoded client-side in real-time for instant P2P/merchant transfers.
2. **Handwritten Bank Details:** Snapping a photo of bank details scribbled on paper. Euda parses the handwriting and extracts the bank name and account number.
3. **Chat Screenshots (WhatsApp/Telegram):** Uploading screenshot images from the gallery. The AI ignores background chat bubbles/timestamps and extracts the transfer recipient's bank details.
4. **Supplier Invoices:** Parsing PDF or image invoices to auto-populate transfer fields.

### Transfer Verification Flow:

- After scanning, Besidebanq shows an animated loader: *"Euda is reading your document..."*
  - Besidebanq queries the target bank's API using the extracted account number to verify the recipient's real name.
  - A confirmation sheet displays the auto-filled details (Bank Name, Account Number, Verified Recipient Name, and parsed Amount) for user approval before PIN/biometric authorization.
- 

## 8.6 Add Funds (Receive Money)

- Fund from linked domestic bank account.
- Fund via debit card.

- Receive via BanqDrop from another user.
- Receive via bank transfer (local account details provided per currency).
- Direct deposit (salary/recurring).
- QR code for receiving BanqDrop payments in person.

## 8.7 Swap

- Convert between currencies held in wallets.
- Mid-market rate with transparent fee breakdown.
- Instant execution.

## 8.8 Recipients (Saved Payees)

- Saved list: name, @tag, or bank details.
  - **Payee Groups (Batch Templates):** Users can group multiple saved payees into a custom list (e.g. "China Supplier Cohort"). This group can be selected in a single click to auto-populate multi-recipient transfers or Buddy disbursements.
  - Recent recipients shown on Move screen for quick access.
- 

# 9. Cards

## 9.1 Card Types

- **Virtual Card:** Instantly issued upon request; for online & global spending.
- **Physical Card:** Branded Visa card delivered by mail; for in-person global use.

## 9.2 Card Features

- Besidebanq-branded Visa card.
- Instant freeze / unfreeze from app.
- Per-card spending limits (daily, per transaction).
- View full card details (number, CVV, expiry) secured behind PIN/biometric.
- **Dynamic Card Funding & Authorization Engine:** When the user swipes their physical card or pays online, Besidebanq's payment authorization gateway intercepts the request and checks their user-designated default card-funding wallet (which can be set to NGN, USD, or stablecoins USDC/USDT). Besidebanq executes real-time FX conversion and settles the card transaction on-the-fly. If the selected default wallet has insufficient funds, the transaction is declined.
- **3D Secure (3DS) Verification:** All online card payments are protected by 3DS. They require the user to input a 6-digit OTP sent via SMS, or complete a Face ID confirmation via an instant Besidebanq

push notification redirecting them into the app.

### 9.3 Card Onboarding Screen

- Hero card image (branded design).
- Tagline: *"Get a card that works — stream, shop and spend worldwide"*.
- **"Get Started"** CTA.

### 9.4 Card Management

- All cards in swipeable carousel on Home screen.
  - Tap card → Card detail screen → Manage (freeze, limits, view details).
- 

## 10. Accounts — Multi-Currency Wallets

### 10.1 Supported Fiat Currencies (Launch)

- NG NGN — Nigerian Naira
- US USD — US Dollar
- EU EUR — Euro
- GB GBP — British Pound

### 10.2 Supported Stablecoin Wallets (Launch)

-  USDC — USD Coin
-  USDT — Tether USD
-  wUSD — Wrapped USD Stablecoin

### 10.3 Account Features

- Each currency/stablecoin has its own wallet with a separate, independently tracked balance.
- Fiat wallets: local account details for receiving (routing + account number for USD; IBAN + sort code for GBP/EUR).
- Stablecoin wallets: unique on-chain deposit address per supported network shown under each wallet's "Receive" screen.
- Switch between all wallets via the accounts dropdown on the Home screen.
- Balance chart updates per selected wallet.

### 10.4 Direct Deposit

- Set Besidebanq account as salary or recurring payment destination.
  - Supported for USD, GBP, EUR accounts.
- 

## 11. Savings

### 11.1 Overview

USD-denominated, high-yield savings product with daily interest accrual.

### 11.2 Features

- **APY Rate:** 3.1% standard APY.
  - **Yield Generation Model:** Yield is generated by allocating funds into low-risk, yield-bearing US Treasury assets and money market instruments managed by our licensed Brokerage-as-a-Service Partner, ensuring a compliant and risk-minimized growth model.
  - Interest accrues daily, visible in-app.
  - No lock-in — withdraw anytime.
  - Savings balance shown as widget on Home screen.
- 

## 12. Trade — Stocks, ETFs & Forecast Markets

### 12.1 Tab Structure

Four sub-tabs: **For You** | **Markets** | **Stocks** | **ETFs**

### 12.2 Forecast Markets (Prediction Markets)

- Users buy YES or NO positions on real-world event outcomes.
- Price = market's implied probability (e.g. \$0.65 = 65% chance of YES).
- Contracts settle at \$1.00 (correct) or \$0.00 (incorrect) at resolution.
- Volume displayed per market.
- **Dual-Source Oracle Resolution:** Markets are automatically resolved by Besidebanq's oracle integration matching reports from at least two independent premium global news outlets or official APIs.
- **Arbitration Settlement Lock:** If the data feeds disagree or a settlement is disputed by the community, the contract undergoes a **24-hour Arbitration Lock**. During this lock, Besidebanq's compliance team manually reviews official records to resolve the resolution.

- **Exposure & Risk Caps:** To comply with regional predictions/gaming frameworks and protect user capital, the platform enforces a maximum betting limit of \$500 per user per event, and strictly prohibits leveraged or margin trading.

## 12.3 US Stocks

- Real-time US stock market prices.
- Buy and sell with market and limit orders.
- Fractional shares supported (invest from \$1).
- **Compliance & KYC Clearance:** Access to US stocks and fractional trading is subject to KYC/AML approval matching the guidelines of our licensed Brokerage-as-a-Service Partner (limited to supported non-US/EU jurisdictions or complying with SEC rules).
- Live sparkline charts on stock cards.

## 12.4 ETFs

- Curated selection of global ETFs.
- Same trading interface as stocks.
- Categorised by theme: Tech, S&P 500, Emerging Markets, Dividend, etc.

## 12.5 Activity (Portfolio)

Three tabs: **Positions** | **Open Orders** | **History**.

- **Total Equity** displayed in USD at top.
- Filter chips: All | In profit | In loss | Closing soon.

# 13. Buddy

## 13.1 Overview

Buddy is Besidebanq's group collective wallet feature. Instead of pooling funds into a single centralized account (which introduces regulatory and custodial risks), Besidebanq uses an **escrow-like wallet locking mechanism**.

Members contribute "virtually" to a Circle. These funds do not leave their own accounts. Instead, they are earmarked and locked within their individual wallets. Transfers are executed directly from members' locked balances only after a **100% unanimous vote of all contributors** is reached.

This is a **democratic shared fund** — not a rotating payout system (Ajo).

### 13.1.1 Legal Standing & Compliance Rationale

1. **No Fund Commingling (Custody Compliance):** Funds contributed by members never leave their individual personal accounts until the moment a transfer is approved.
2. **Avoidance of Banking Classification:** By locking/earmarking funds at the user level, Besidebanq is not "taking deposits" or "managing cooperative investments" in a corporate capacity.
3. **Revocation & Lock Release:** Releasing a lock is a local wallet state transition, preventing any "unlawful withholding of funds" claims.
4. **Tax and AML Reporting:** Since all transactions originate from and terminate in verified individual wallets, Besidebanq retains a compliant audit trail.

## 13.2 Key Concepts

| Term                  | Definition                                                                                                                                                                            |
|-----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Circle</b>         | A named group directory with defined members and a virtual pool display.                                                                                                              |
| <b>Member</b>         | Any Besidebanq user who joins a Circle.                                                                                                                                               |
| <b>Admin</b>          | The active manager of the Circle. By default, the Circle creator starts as the initial Admin. However, at any time, members can vote (80% majority) to replace them with a new Admin. |
| <b>Locked Balance</b> | Funds earmarked in a member's own wallet specifically for the Circle (fiat or stablecoins wUSD/USDC/USDT). Users cannot spend or withdraw locked funds.                               |
| <b>Proposal</b>       | A request to unlock and transfer a specific amount from the Circle's total locked pool.                                                                                               |
| <b>Vote</b>           | A member's YES or NO on an active proposal.                                                                                                                                           |
| <b>Quorum</b>         | <b>100% of contributors</b> (unanimous approval of those who have locked funds) must vote YES for a proposal to pass.                                                                 |
| <b>Timelock</b>       | Proposals stay active and pending for exactly 48 hours.                                                                                                                               |

## 13.3 Circle Creation & Inviting Flow

1. Tap "Create a Circle"
2. Enter Circle name and configure Rules (including early exit penalty percentages: e.g. 0%, 5%, 10%).
3. **Invite Members (Dual Methods):**
  - **In-App Direct Invite:** Search and select other Besidebanq users by @tag or phone number. They receive a push notification to accept or decline.
  - **Shareable Invite Link:** Generate a secure join link (e.g. via WhatsApp/Telegram). For existing users, tapping opens the Circle join sheet. For new users, it triggers a download redirect and automatically prompts the join sheet post-signup (viral loop).
4. Circle becomes active once at least 2 members have accepted and joined.

5. **Initial Governance:** To prevent funding deadlocks and ensure immediate operational capability, the Circle **Creator starts as the initial Admin** by default.

## 13.4 Contributions & Wallet Locking

- Any member can lock any amount of local fiat (NGN/USD/EUR/GBP) or stablecoins (wUSD/USDC/USDT) in their wallet for the Circle at any time.
- The app shows a total virtual pool balance (sum of all members' locked balances) in a primary currency, showing the split of fiat and crypto assets.
- Earmarked funds remain in the user's name/wallet but are restricted from regular spend (bills, cards, stock trading, standard bank transfers).
- **Zero-Balance Prompts & Action Blocks:** Users with a Locked Balance of 0 are shown inline nudges to contribute. They are restricted from creating or voting on proposals until they lock a balance  $\$>0\$$ .

## 13.5 Proposal & Voting Flow

1. Any member can submit a **Transfer Proposal**.
  - **Static Amount:** The proposal specifies a fixed sum. Proportional shares are locked immediately.
  - **Variable Amount:** The proposal specifies a maximum budget cap (e.g. for dynamic expenses).
2. The app calculates each member's share of the transfer proportionally based on their locked balance.
3. All members receive a push notification immediately.
4. Members have **48 hours** to vote YES or NO. Only members with **Locked Balance > 0 (Contributors)** are eligible to vote.
5. **If 100% of contributors vote YES** before the deadline, the proposal passes.
  - *Admin Manual Close:* The admin can manually close voting early once it reaches 100% approval to prepare disbursement.
6. **If the 48-hour deadline passes** without 100% YES votes, the proposal automatically expires and fails.
7. **Disbursement & Payout Execution:**
  - Once voting ends, **only the elected Admin can initiate the actual outward fund execution**.
  - *Final Amount Input:* The admin enters the exact disbursement amount (up to the approved limit).
  - *Single Unified Transaction (Consolidated Payout):* Behind the scenes, Besidebanq sweeps and pools members' proportional debits instantly into an internal system clearing account. It then executes **one single outward transaction** to the recipient. This guarantees the payee receives exactly **one credit alert** and one transaction from Besidebanq, avoiding messy fragmented payments and multiple fees.
  - **Multi-Recipient Batch Payout Builder:** A single proposal can disburse funds to multiple recipients in different destination currencies. The Admin can populate this batch using three

flexible methods:

1. **Manual Entry:** Adding and typing account details for each payee individually.
  2. **Saved Groups (Recipient Templates):** Selecting a pre-saved cohort of multiple payees (e.g. "Weekly Logistics Team") to auto-populate the entire list in one click.
  3. **Multimodal Single Scan (Euda OCR):** Uploading a single document or screenshot (e.g. a WhatsApp chat list containing multiple account numbers). Euda parses the image, extracts all unique bank details, runs real-time API name verification on each, and maps them as distinct payees in the batch list.
- **Single-Batch Execution:** To prevent partial payouts from prematurely unlocking funds, multi-recipient disbursements must be executed by the Admin as a single, unified batch transaction. The system processes the entire batch atomically, and unlocks any remaining surplus only after the complete batch has been executed.
8. **Proportional Refunds:** If the disbursed amount is less than the locked budget, the unused remainder is immediately unlocked and returned to contributors **proportionally** based on their contribution percentage.
  9. **History Audit Trail:** The app maintains a secure, immutable history of all active, passed, failed (expired), cancelled, and executed proposals.

## 13.6 Voluntary Exit & Member Removal

- **Voluntary Exit (Opt-Out):**
  - A member can voluntarily exit the Circle and unlock their locked funds at any time, **provided they have not already voted YES on an active Transfer Proposal.**
  - **Commitment Lockout Rule:** A member **cannot** voluntarily exit or unlock their funds if they have locked funds that are currently committed to a **Passed, Pending-Execution Proposal** or an **Active Vote** that they already approved. They are locked into the Circle until that payout batch is executed or the proposal is cancelled/expired.
  - If a member has voted YES, they are locked in until the active proposal either executes or expires.
  - Upon exit, any pre-agreed early exit penalty (e.g. 5%) is deducted from the locked amount and distributed to the remaining members' locked pools. The remaining balance is unlocked and returned to their spendable wallet.
- **Member Removal:**
  - Admin cannot remove contributing members unilaterally.
  - Removal requires initiating a **Removal Proposal**, which must receive a **100% YES vote** from all other members (excluding the member being removed).

## 13.7 Admin Election & Permissions

- **Admin Election & Replacement:**

- The Circle Creator serves as the **initial Admin** from creation.
- At any time, any active member can nominate themselves or another member to replace the current Admin.
- The new Admin is elected and replaces the incumbent immediately upon receiving an **80% majority vote** of all active members.
- **Admin Permissions:**
  - Remove non-contributing members instantly.
  - Initiate removal proposals for contributing members.
  - Rename the Circle.
  - Archive / close the Circle (requires 100% vote).
  - **Disbursement Initiation:** Execute payments from passed proposals, including inputting final amounts, routing multi-recipient payouts, and triggers.
  - Cannot unilaterally move or confiscate funds.

### 13.8 Circle Dissolution

- Any member can propose Circle dissolution.
- Requires **100% unanimous vote**.
- On successful dissolution: all locked balances are instantly unlocked and returned to the contributors' spendable wallets.

### 13.9 Edge Cases

| Scenario                               | System Behaviour                                                                            |
|----------------------------------------|---------------------------------------------------------------------------------------------|
| Member leaves mid-vote                 | If they hadn't voted YES yet, they can leave; the vote is cancelled or quorum recalculated. |
| Member misses 48hr window              | Abstention — results in proposal expiry since 100% approval is required.                    |
| Admin leaves the Circle                | Admin role becomes vacant; a new admin election proposal is opened automatically.           |
| Insufficient Circle funds for proposal | Proposal blocked at submission with error message.                                          |
| Only 2 members and one leaves          | Circle paused; remaining member can dissolve and unlock funds.                              |

## 14. Lifestyle Tab

## 14.1 Overview

The Lifestyle tab extends Besidebanq beyond finance into daily utility, making it a true super-app.

## 14.2 eSIM

- Purchase data plans for 150+ countries globally.
- Browse by country (auto-detect location or manual search).
- Pay directly from Besidebanq NGN/USD wallet.
- eSIM profile delivered digitally — no physical SIM swap required.

## 14.3 Bill Payments

All bill payments accessible directly from the Lifestyle tab:

- **Airtime & Data:** All local networks.
- **Entertainment:** DSTV, GOtv, Showmax, Netflix top-up.
- **Electricity:** Prepaid meter token top-up.

## 14.4 Gift Cards

### 14.4.1 Catalog Discovery & Personalization

- **Global & Regional Catalog:** Besidebanq integrates a vendor-agnostic catalog (via the Gift Card Aggregator API) enabling users to search, filter, and buy:
  - *Global Digital Brands:* App Store & iTunes, Google Play, Amazon, Netflix, Spotify, Steam, PlayStation, Xbox.
  - *Regional Brands:* Local supermarkets, ride-sharing, and retail chains (adapted dynamically based on user region or recipient region).
- **Search & Filter:** Users can browse by **Country**, **Category** (Retail, Gaming, Entertainment, Food), or search directly by brand name.

### 14.4.2 Purchase & Currency Checkout Flow

- **Multi-Wallet Support:** Users can fund the purchase using any active fiat wallet (NGN, USD, EUR, GBP) or stablecoin wallet (USDC, USDT, wUSD).
- **Dynamic FX Conversion:** If the user pays with USDC but purchases a CAD Amazon gift card, Besidebanq calculates and displays the real-time FX rate, processing fee, and final deduction amount upfront.
- **Transaction Limits (Anti-Fraud):**
  - Max purchase limit of \$500 per transaction and \$1,000 cumulative per day (to prevent credit card/crypto cashout fraud).

- Requires Tier 2 KYC for purchases over \$100.

#### 14.4.3 The Gifting Flow (P2P Social Viral Loop)

- **Gifting Option:** During checkout, the user toggles **"Send as a Gift"**.
- **Personalization:** Senders select a digital greeting template (e.g., Birthday, Thank You, Holiday) and write a custom memo.
- **Delivery Routes:**
  - **To Besidebanq User (@tag):** Recipient gets an in-app alert. Opening it triggers a premium **"gift envelope ripping" animation** that reveals the card, code, and note. The card is automatically saved to their *Voucher Wallet*.
  - **To Non-User (Email/SMS):** Recipient receives a link opening a customized Besidebanq web page displaying the interactive greeting card and voucher. The page includes download links to prompt them to claim/store it in the Besidebanq app.

#### 14.4.4 Voucher Storage & Management (Voucher Wallet)

- A dedicated **"My Vouchers"** sub-tab inside the Lifestyle tab.
- **Voucher Card Detail view:** Shows the brand logo, active code, PIN, expiry date, detailed redemption instructions, and a quick "Copy Code" button.
- Once used, users can toggle a **"Mark as Redeemed"** button to archive the card.

#### 14.4.5 Operational Edge Cases & Security

- **Strict Refund Policy:** All gift card sales are final and non-refundable. This is explicitly agreed to via a checkbox on the final checkout screen.
- **Provider API Failure (Fallback):** If the aggregator API fails to deliver the code after the user's wallet is debited:
  - The transaction status is marked as **"Pending Verification"**.
  - The system auto-retries for 3 minutes.
  - If it remains unissued, Besidebanq automatically reverses the debit, refunds the user's wallet in full, and triggers a push alert: *"Gift card purchase failed. Your wallet has been refunded."*

### 14.5 banq Points ★

Besidebanq's loyalty and rewards program details, including earning tiers and redemption rules, are consolidated in **Section 16.3 (banq Points — Gamification System)**. Refer to that section for the transactional points-multiplier model.

## 15. Profile & Settings

## 15.1 Profile Screen

- Avatar, Full Name, and @tag (with Public / Private toggle).
- Personal Information: Name, DOB, Gender, Marital status.
- Contact Information: Phone, Email, Next of Kin, Address.
- Employment Information: Nationality, Employment status, Income range.

## 15.2 Settings Sections

- **Account:** Direct Deposit, Saved Recipients, App Preference (Theme, Notification).
- **Product:** Savings details & APY.
- **Security:** PIN & Authentication, Account limits, Device Management.
- **About:** Rates & Fees, Support & FAQ, Privacy Policy.

# 16. Referral Program

## 16.1 Overview

Every user receives a unique referral code. When shared and used, both parties earn **banq Points** rewards.

## 16.2 Reward Structure

- **Referrer:** Earns a **banq Points bonus** for each successful referral.
- **Referee:** Earns a **Welcome banq Points bonus** credited after completing their first transaction.

"Successful referral" = referee signs up + completes KYC Tier 1 + makes first transaction.

# 16.3 banq Points — Gamification System

Besidebanq rewards users with **banq Points** for every transaction. Points earned are proportional to the fee revenue Besidebanq generates from that transaction type — higher-margin transactions earn more points.

| Transaction Type                                  | Fee Level | banq Points Tier                 |
|---------------------------------------------------|-----------|----------------------------------|
| <b>BanqDrop (in-app P2P — fiat or stablecoin)</b> | Zero fee  | ★ Micro (engagement reward only) |

| Transaction Type                                    | Fee Level               | banq Points Tier |
|-----------------------------------------------------|-------------------------|------------------|
| <b>Domestic Bank Transfer</b>                       | Flat low fee            | ★ Low            |
| <b>Bill Payments</b>                                | Small platform fee      | ★ ★ Low–Medium   |
| <b>Card Spend (Virtual or Physical)</b>             | Interchange %           | ★ ★ Medium       |
| <b>eSIM Purchase</b>                                | Retail margin           | ★ ★ Medium       |
| <b>Gift Card Purchase</b>                           | Retail margin           | ★ ★ Medium       |
| <b>USD Savings (Active Balance)</b>                 | Spread income           | ★ Low            |
| <b>Swap (Currency Exchange)</b>                     | FX spread fee           | ★ ★ Medium       |
| <b>Stock / ETF Trade</b>                            | Commission %            | ★ ★ ★ High       |
| <b>Forecast Market</b>                              | Platform fee            | ★ ★ ★ High       |
| <b>International Stablecoin Transfer (On-Chain)</b> | FX spread + network fee | ★ ★ ★ ★ Highest  |
| <b>China Fiat Payout</b>                            | Partner fee + FX spread | ★ ★ ★ ★ Highest  |

*[!WARNING] **Commercial & Unit-Economics Review Required:** The transaction points tiers, earning thresholds, and reward redemption values documented above are provisional. Prior to implementation, a complete commercial and unit-economics review must be executed by the financial/operations team. This review will establish the exact mathematical formulas linking point values to Besidebanq's transactional net profit margins to prevent points inflation and ensure sustainable program margins.*

**Redemption:** banq Points can be redeemed for exclusive in-app perks, discounts on fees, and lifestyle rewards (e.g. eSIM data credit, reduced trading commissions).

## 17. Notifications

### 17.1 Notification Types

- **Transaction alert:** Money sent / received / failed.
- **BanqDrop received:** Another user sends a BanqDrop.
- **Buddy:** New proposal, vote result, or new member notification.
- **Trade & Forecast:** Order filled, position closed, settlement result.

- **Savings:** Daily interest credit alert.
- **KYC:** Step completed or verification failed.
- **Referral:** Referee completed qualifying action.
- **Euda suggestion:** AI-generated financial nudge.

## 18. In-App Support

### 18.1 Live Support Chat

- **Euda** handles common questions as an AI-first response layer.
- Escalation to human agent for complex issues.
- Full chat history preserved across sessions.

## 19. Third-Party API Integrations

To ensure flexibility and keep the PRD vendor-agnostic, third-party provider names are generalized to architectural roles.

| Feature                | Provider Role                       | Notes                                        |
|------------------------|-------------------------------------|----------------------------------------------|
| US Stocks & ETFs       | Brokerage-as-a-Service Provider     | Fractional shares; SEC compliance            |
| Forecast Markets       | Regulated Prediction Market API     | REST + WebSocket; CFTC-regulated             |
| eSIM                   | Global eSIM API Partner             | 150+ countries; sandbox testing              |
| Bill Payments          | Bills Aggregator API                | Domestic bills utility integration           |
| Gift Cards             | Gift Card Aggregator API            | Global digital gift card catalog & delivery  |
| KYC / BVN Verification | Local Identity Verification API     | Domestic identity & registry checks          |
| Liveness / ID Check    | Biometric Liveness Verification API | 3D facial matching                           |
| Push Notifications     | Cloud Messaging Service             | iOS + Android push services                  |
| AI Agent & OCR         | Foundation AI API Provider          | Multimodal vision & natural language parsing |
| Stablecoin Payouts     | Stablecoin Payout Gateway API       | Auto-routing across Tron, Solana, Base, etc. |

| Feature        | Provider Role               | Notes                          |
|----------------|-----------------------------|--------------------------------|
| SMS OTP        | SMS Gateway API             | Domestic SMS OTP delivery      |
| Email OTP      | Transactional Email Service | 6-digit email verification OTP |
| Google Sign-In | Social Auth Provider SDK    | OAuth 2.0 native flow          |
| Credit Bureau  | Credit Bureau Agency API    | Credit building reporting      |
| FX Rates       | Real-time FX Data Provider  | Mid-market exchange rate feed  |

## 20. Security & Compliance

### 20.1 Authentication

- Transaction PIN (4 or 6 digits) required for all fund movements.
- Biometric authentication (Face ID / Fingerprint) option.
- 2FA via SMS/Email OTP for password reset, new device login, or large transactions.
- **Session Timeout & Quick Re-entry:**
  - Standard inactive session timeout occurs after 5 minutes of background inactivity.
  - To log back in after timeout, the user is prompted for **Biometric Authentication (Face ID / Fingerprint)** or their **Transaction PIN** as a fallback.
  - Full email/password credentials are only required if the user explicitly logs out or switches devices.

### 20.2 Device Management

- **Single Active Device Binding:** In strict compliance with central banking (CBN) mobile banking guidelines, an account can only be active on a **single primary mobile device** at any given time.
- **Automatic Deactivation Flow:** Logging in on a new device automatically revokes the session token, invalidates biometrics, and logs the user out of the previous device on the backend.
- **Device Swap Authorization:** Switching the primary bound device requires full 2FA verification (both Email and SMS OTP) and triggers immediate security email/push alerts.

*[!WARNING] **Regulatory Compliance Review Required (Single-Device Binding):** Device management architecture must be strictly reviewed by the compliance team to ensure it adheres to the CBN's "one active device" anti-fraud guidelines. Multi-device active logins are prohibited.*

## 20.3 Account Limits

- Tiered transaction limits based on KYC completion level (Tier 1 to Tier 3).
- Users can view limits and submit increases in-app.

## 20.4 Data Security

- End-to-end encryption for all financial transactions.
- BVN stored hashed — never in plain text in database.
- Card details viewable only after PIN or biometric confirmation.
- PCI-DSS compliance for all card data handling.

## 20.5 Regulatory Compliance

- Compliant with central banking, securities exchange, and data protection guidelines per active jurisdiction (E.g. CBN, SEC, NDPR, GDPR).
- **Buddy Wallet Locking:** Compliance architecture to avoid unlicensed collective investment or banking classification.
- **Stablecoin compliance:** Adherence to cross-border transfer laws and AML monitoring.
- **Forecast Markets compliance:** Adherence to regulated infrastructure compliance rules.

## 20.6 Fraud Prevention

- Real-time transaction monitoring and velocity checks.
- Recipient confirmation screen before **BanqDrop** (name + avatar lookup).
- BVN mismatch: limited retries with count shown to user.
- Suspicious activity triggers automatic account locks.

---

# 21. Marketing Website Specifications

To present Besidebanq's unique value proposition effectively to the global African diaspora, the marketing website landing page supports a **Phase-Based Lifecycle Configuration** toggled via the CMS/admin console.

---

## 21.1 Pre-Launch Phase — Full Specification

The pre-launch page is a **standalone, dedicated experience** focused entirely on building excitement, capturing early adopters, and creating a viral loop before the app is publicly available.

## Hero Section (Above the Fold)

- **Headline:** *"Helping you live a better life, globally."*
- **Sub-copy:** *"The financial super-app built for the global African community. BanqDrop money instantly, save in USD, invest, and let Euda manage your finances — coming soon."*
- **@tag Reservation Widget:** The primary conversion element. Visitors type their desired @tag handle, verify real-time availability, enter their email, and confirm via a **6-digit Email OTP**. On success, they see a personalized confirmation: *"@[handle] is yours. You're #[rank] on the waitlist!"*
  - **The Expiration Timer (Urgency Mechanic):** To drive conversion on launch day, waitlist members are warned: *"Your reserved @tag is guaranteed for **14 days** after launch. If the account is not activated in-app within this window, the handle will be released back to the public pool."*
  - **Marketing Opt-In Consent:** The widget features a visible disclaimer checkbox under the email input field: *"By claiming your @tag, you agree to receive product updates, announcement details, and marketing emails from Besidebanq. You can unsubscribe at any time."*
  - **Welcome & Confirmation Email:** Upon successful verification, the transactional email API instantly triggers a Welcome Email confirming their reserved @tag, their current waitlist position, and detailed product/marketing updates.

## Social Proof Live Counter

- A real-time animating counter displaying: *"[X] people have already claimed their @tag"* — creating urgency and FOMO for new visitors.

## Waitlist Rank & Referral Mini-Dashboard (Post-Signup)

After reserving their @tag, each user accesses a personal mini-dashboard showing:

- Their current waitlist rank position.
- Their unique shareable referral link.
- Number of friends referred so far.
- Number of positions moved up the queue through referrals.
- **Incentive:** *"Refer friends and earn bonus banq Points on launch day."* (Points only — no cash promises.)
- **Returning User Login (Check Position):** If a returning, already-registered user enters their email in the widget, they are prompted to verify a **6-digit Email OTP** to securely log back into their personal Mini-Dashboard to view their current rank, referral stats, and copy their link.

## Feature Teaser Section ("*What's Coming*")

Animated, visually rich feature preview cards:

- **BanqDrop:** *"Send money to any @tag, instantly. Free. Forever."*
- **Euda AI:** *"Your financial partner that actually gets you."*
- **Stablecoin Transfers:** *"From Accra to London to Shanghai in seconds."*

- **Buddy:** "Pool funds. Vote democratically. Pay together."

### Founding Member Exclusive Benefits

A clearly highlighted section listing what waitlist members receive on launch day:

- Their reserved @tag guaranteed.
- Priority app download access.
- A **Founding Member banq Points bonus** credited to their wallet on launch day.
- A special "**Founding Member**" badge permanently displayed on their in-app profile.

### Sticky Bottom CTA Bar

- A persistent sticky bar (on mobile and desktop) repeating the @tag reservation call-to-action so the visitor is never far from converting.

## 21.2 Post-Launch Phase (Active User Downloads)

- **Goal:** Drive direct app installations and active accounts.
- **Hero Section CTA:** The waitlist input is replaced by prominent **App Store (iOS) and Google Play (Android) download badges**, plus a "**Log In / Web Dashboard**" button in the navigation header.

## 21.3 Core Page Sections & Structure (Supporting Both Phases)

### 1. The USP Hero Header:

- **Visual Asset:** High-resolution split screen showing premium mockups of Besidebanq physical/virtual cards, and the Euda AI chat layout on a mobile screen.
- **Headline:** "Helping you live a better life, globally."
- **Copy Strategy:** Human-centric value statement focusing on financial peace of mind, family support, and simplified borderless wealth building. Avoids dry tech specs at the landing page top.

### 2. Audience Partitioning (Individuals vs. Businesses):

- Tabbed navigation dividing features by audience:
  - **For Individuals (Daily Life & Wealth):**
    - **BanqDrop (In-App P2P):**
      - *Visual Asset:* Mockup of two phones transferring money via @tag. Phone B shows a toast: "@amara just BanqDropped you 100 USDC! ⚡".

- **Copy Strategy:** Highlight instant, zero-fee, P2P transfers in both fiat and stablecoins using just a `@tag` without memorizing bank numbers.
- **USD Savings:** Highlighting yield-bearing savings to build wealth safely.
- **eSIM Mobile Data:** Low-cost roaming packages in 150+ countries.
- **Digital Gift Cards:** Global gifting of Apple, Amazon, or retail cards directly to loved ones.
- **For Importers & Businesses (Trade & Operations):**
  - **International Payouts (Stablecoins & China Rails):**
    - **Visual Asset:** Split screen showing a UK importer paying in stablecoins, and a Chinese supplier in Guangzhou receiving CNY instantly on Alipay. Include a speed comparison table: *Besidebanq (Seconds, low fee) vs. Traditional Bank Wire (3-5 Days, high fees)*.
    - **Copy Strategy:** Emphasize the "Just-In-Time" currency conversion. Sellers receive native CNY or local currency directly in bank/Alipay accounts, while Besidebanq converts stablecoins behind the scenes.
  - **Buddy (Democratic Escrow):**
    - **Visual Asset:** Mockup of a business treasury pool with member icons, contribution percentages, and **YES/NO voting status buttons** showing a passed transaction.
    - **Copy Strategy:** Outline the security of the locked-wallet escrow model. No funds leave user wallets without a 100% unanimous contributor vote. Highlight saved payee groups and single-payout details.
  - **Fractional Stocks & ETFs:** Investing from \$1 in global markets.

### 3. Interactive Euda Chat Demo:

- **Visual Asset:** Click-to-chat preview widget simulating a conversation with **Euda**.
- **Copy Strategy:** Explains Euda's origin from *Eudaimonia* (human flourishing). Demonstrates her warm, supportive AI personality (e.g. celebrating self-care rather than creating expense guilt).
- **Simulator Script:**
  - *Visitor selects prompt: "I spent way too much money this weekend."*
  - *Euda Response: "Hey, don't sweat it! Spending on dinners and friends is an investment in your social health and self-care. Let's look at your target for the week and see if we can make a tiny \$5 adjustment to keep you on track. You got this! 💙"*

### 4. Interactive Euda OCR & Scan-to-Transfer Demo:

- **Visual Asset:** An interactive file upload playground widget on the landing page.
- **The Simulation:** Visitors click one of three pre-loaded mock files (a WhatsApp chat screenshot with bank details, a handwritten note, or a supplier invoice). Euda highlights key parsed details

(Bank Name, Account, Payee, Amount) with animated bounding boxes and fills out a mock transfer sheet instantly.

#### 5. Multi-Asset Fee & Speed Calculator:

- An interactive calculator where visitors select a source currency and destination to see transaction costs and estimated blockchain settlement speeds across the 8 supported networks.

#### 6. eSIM Destination & Price Preview Widget:

- A simple data plan search bar: "Where are you traveling next?" Tapping a country previews active bundles (e.g. "1GB / 7 Days for \$2.50").

#### 7. Gift Card Gifting Animation Preview:

- A visual preview showing the social gifting loop. Displays a recipient tapping a digital gift envelope that rips open in-app with a customized greeting note.

#### 8. Security & Trust Footer:

- Vendor-agnostic disclosures covering biometric security, end-to-end data encryption, PCI-DSS compliance, and generic regional regulatory compliance frameworks.

## 21.4 Dynamic Localization & Routing (Single Build Setup)

To deliver a personalized experience for the global diaspora without maintaining separate regional builds, the marketing website implements dynamic routing:

- **Corridor Landing Pages:** A single page template at `besidebanq.com/send/[source]-to-[destination]` dynamically adapts copy and currency defaults:
  - Example ( `/send/canada-to-nigeria` ): Headline swaps to "Send money from Canada to Nigeria instantly." The calculator defaults to **CAD to NGN**.
  - Example ( `/send/uk-to-china` ): Headline swaps to "Pay Chinese suppliers directly from the UK." The calculator defaults to **GBP to CNY** and highlights WeChat Pay/Alipay options.
- **Geo-IP Auto-Detection:** When visiting the root URL ( `besidebanq.com` ), the site checks the visitor's location via IP. It automatically pre-selects the local fiat currency (e.g., GBP for the UK, CAD for Canada) as the sender's default in the calculator widget to minimize user friction.

## 21.5 Sitemap & Site Navigation

- **Global Header:**
  - Logo (Gradient teardrop/play-button shape with a smiley face)
  - Products Dropdown (Move, Euda AI, Buddy)

- Audience (For Individuals, For Business)
- Resources (Help Center, APY Calculator)
- **CTA Button:**
  - *Pre-Launch Phase:* "Claim your @tag" (opens waitlist modal)
  - *Post-Launch Phase:* "Log In / Web Dashboard" (links to web app) & "Download App"
- **Global Footer:**
  - **Sitemap Links:** Product, Company, Support, Legal (Terms of Service, Privacy Policy, Cookie Policy).
  - **Regulatory Disclosures:** Clear, vendor-agnostic disclaimers outlining licensing boundaries (e.g., *"Besidebanq is a financial technology platform, not a bank. Banking and brokerage services are provided by our licensed partner banks and brokerage providers."*).

## 21.6 Marketing Analytics, Tracking & SEO

- **Tracking Pixels & Analytics:**
  - Google Tag Manager (GTM), Meta (Facebook) Pixel, and TikTok Pixel script specifications.
  - **Custom Tracking Events:**
    - `Waitlist_Initiated` : Fired when a user types their desired @tag handle.
    - `Waitlist_Completed` : Fired upon successful Email OTP verification.
    - `Referral_Link_Copied` : Fired when a waitlist member copies their dashboard link.
    - `App_Download_Clicked` : Fired when a visitor taps the App Store or Google Play badges.
- **SEO Copywriting Keyword Clusters:**
  - Senders: *"send stablecoins from UK to Nigeria", "pay Chinese suppliers via WeChat Pay", "USDC stablecoin transfers"*.
  - Group: *"cooperative savings escrow wallet", "escrow group budget app"*.
  - Lifestyle: *"cheap travel eSIM Africa", "buy global gift cards online"*.

## Appendix A — Feature Priority Matrix

| Feature                   | Priority   | Complexity | Launch Phase |
|---------------------------|------------|------------|--------------|
| Onboarding & KYC (Tiered) | 🔴 Critical | Medium     | Phase 1      |
| Home Dashboard            | 🔴 Critical | Medium     | Phase 1      |

| Feature                               | Priority   | Complexity | Launch Phase |
|---------------------------------------|------------|------------|--------------|
| Euda AI Agent (basic)                 | 🔴 Critical | High       | Phase 1      |
| Multi-currency Accounts               | 🔴 Critical | High       | Phase 1      |
| BanqDrop (P2P Transfer)               | 🔴 Critical | Low        | Phase 1      |
| Cards (Virtual)                       | 🔴 Critical | Medium     | Phase 1      |
| Savings                               | 🟡 High     | Medium     | Phase 1      |
| Bill Payments                         | 🟡 High     | Low        | Phase 1      |
